KRELAGE's BULBS FOR FALL PLANTING 1916.

A catalog of Holland bulbs grown and offered by
E. H. Krelage & Son, Haarlem (Holland)
established in 1811.

A Holland bulb garden of three hundred years ago.

This picture is a reduced reproduction of an engraving published by Crispian de Passe Junior, in 1614, in the period when the Hollanders founded New Amsterdam. It is the spring part frontispice of his wonderful "Hortus floridus", a book of flower engravings that have never been surpassed in exactness or artistry. The Krelage library contains several copies of this exceedingly scarce work.

Dear Sir or Madam,

We have much pleasure in again handing our bulb catalog.

Notwithstanding the abnormal circumstances we were able to execute all orders from the United States since August 1914 and the numerous very flattering testimonials we received are the best proof of the superiority of our supplies and the promptness of delivery.

The forwarding by Holland-America line steamers has hitherto proved to be absolutely safe; indeed every parcel of bulbs has arrived in good condition, although sometimes with some unavoidable delay.

Orders are kindly solicited as early as possible. Correspondence between the United States and Holland is seriously delayed by the British censors' inspection of mails. Correspondence should therefore be settled as far as possible with our agent in New-York, who sends all orders to us at his earliest convenience. We are pleased to say that all orders and correspondence have safely reached us till now, so that you ought not to fear for any disappointment and may depend upon prompt execution of your orders.

Thanking you for the increased interest in our bulbs and for past favor, we again assure you of our most careful attention for your orders.

Yours respectfully,

HAARLEM (Holland).

May 1st, 1916.

E. H. KRELAGE & SON.

TERMS OF BUSINESS.

ALL ORDERS, remittances and correspondence are to be addressed to our sole agent for the United States:

Mr. J. A. DE VEER, 100 William street, Woodbridge Building, NEW YORK.

Cable address: «NYMAPPAR», New York. — A. B. C. Code 4th & 5th editions used. Tel. 3999 John.

All orders are immediately sent to Haarlem (Holland) for execution. Therefore early orders are kindly solicited, as it takes some weeks before the goods can reach the clients. The New York agency has no goods in stock.

PRICES. The prices are all nett cash and **INCLUDE CASES AND PACKING COSTS, OCEAN FREIGHT, DUTY AND FREE DELIVERY IN NEW YORK.**

Not less than 250 bulbs or plants of the same kind will be charged at the price „per 1.000”

“ “ “ 25 “ “ “ “ “ “ “ “ “ “ “ “ “ “ „per 100”

“ “ “ 6 “ “ “ “ “ “ “ “ “ “ “ “ “ “ „per doz.”

ORDERING DIRECTIONS. We particularly request that **customers' names and addresses, and the Post office, County, State and Express or Freight station, be written as plainly as possible, to prevent mistakes. Customers are kindly requested to use the enclosed order form.**

The receipt of an order will be acknowledged by a card.

REMITTING DIRECTIONS. A remittance in full, or ample security for payment must accompany all orders from unknown correspondents. This rule admits of no exceptions.

Bank drafts on New York, Express Money orders or Post office orders payable to Mr. J. A. DE VEER at New York are most convenient. If goods are wanted by Express C.O.D. 25 per cent of the amount must accompany the order.

If a remittance proves not to be sufficient to cover the total amount of invoice, we reserve to us the right of reducing the order, and if the sum remitted surpasses the amount of invoice we shall add bulbs to the amount of the balance.

Replacing varieties which are sold out. If any variety ordered proves to be sold out at receipt of order, we will replace it by some other variety of as nearly as possible the same character. The name of the variety sent instead will be mentioned. If customers do not want any other varieties than those ordered, they should notify us of it when ordering.

In all assortments the selection of varieties must entirely be left to us.

RISK. We relinquish all responsibility as soon as the goods leave our hands, and do not hold ourselves answerable for any damages received on the journey.

COMPLAINTS. All complaints to ensure attention must be preferred **within a week of the receipt of the goods.**

Except when the contrary is stated, we guarantee our bulbs and plants to be **true to name and of the best quality only.** When during the flowering of the bulbs there appear unintentional mistakes, we beg to be informed thereof, in order that we may examine them and make good any just claims.

Krelage's Bulb Catalog for 1916.

Bulbs and Novelties for Fall planting.

INTRODUCTION.

E. H. Krelage.
(1785 - 1855)

Although we have the advantage of business relations with the United States for nearly the same period as our existence as bulb exporters, which covers more than a century, we are convinced that the numerous clients who are of late favoring us with their continued confidence in yearly increasing number will be interested in some notes on the origin and the history of the firm whose bulbs they have learned to appreciate.

The bulb trade is a matter of confidence. Nobody would place an order for bulbs abroad without having the strong conviction that it will be executed as correctly and as excellently as can be desired. The traditions of the firm that have secured her this confidence all over the world were inspired by the man who started the business in 1811.

E. H. KRELAGE, the founder, was a boy of twelve when his father died. It was his object to give his youngest son a commercial education, but the family was a large one and times were bad. Europe suffered under the Napoleonic wars, trade was lamed, life dear. E. H. K. like his brothers had to look for himself and to fight his own struggle for life.

He had a predilection for gardening and became a gardener in three of the best nurseries and bulb farms of Haarlem. Meanwhile Holland had been annexed to France and the poor country and its inhabitants became ruined. In 1811 E. H. K. was foreman in a nursery which turned a bankrupt. There was not even any money left to cover the wages that had not been paid for weeks. Plants served to indemnify young KRELAGE and with these plants he started the business which has now attained to an age of 105 years.

E. H. K. soon decided to start bulb growing and exporting. The mean markets in those days were the German „messes“ and so, happening to have an introduction for Frankfurt on Main, he purchased as many bulbs as he could and travelled to that city which was a very troublesome affair in those days of war and disorder. His success was very encouraging and enabled him to increase his bulb garden and his purchase. Of course he could not grow at once all the bulbs he wanted and so he had to buy them at the local auctions in the neighbourhood of Haarlem. Not being known as a long established grower of financial repute, he managed to have ready money at the first auction where he wanted to buy. He was the champion buyer and astonished all those present by paying cash, which was not customary. He was cheered at the usual dinner which was organized in connection with those old fashioned auctions, and had his credit established at once and for ever.

His business capacity, thorough gardening knowledge and integrity secured his success in coming years. After Napoleon's definitive defeat the state of affairs in Europe became reestablished, business flourished again, and E. H. K. also enjoyed a period of prosperity. Married in 1814, he had however to mourn the loss of his wife already seven years later. She did not leave him children, but in 1824 he married her younger sister, who gave him a son.

The nurseries were regularly laid out and the export increased. Bulb shipments to America dated

already of that period, and the reputation of KRELAGE's nursery became well established. The leading british gardening paper, „Loudon's Gardener's Magazine" of 1830 contains an article on horticulture in Holland, giving a most flattering description of KRELAGE's gardens. Here is an extract:

„With respect to the florists' gardens of Haarlem, I cannot give a better description than by subjoining the following abridged list of the bulbs, cultivated in the establishment of M. E. H. KRELAGE, which was commenced twenty years ago, and must now be acknowledged as one of the best gardens of its kind. M. KRELAGE is a very enthusiastic florist who collected all that is fine and new and has raised since the year 1818 about 300 new varieties of Hyacinths from seed, for one of which flowering for the second time this year £ 100.— was offered, but none of them can be sold before they are propagated. I had the good fortune to learn a good deal about the culture of bulbs from M. KRELAGE, and I may remark that last year, when the tulips in most places looked very ill, they had grown here as well as ever, and so it is with the whole collection".

The article further contains an elaborate list of the plants cultivated and the surface occupied, continuing:

„In all the number of square feet planted with bulbs in this establishment is 12,300 and besides this one finds here quantities of Amaryllises, Ixias, Antholyzas, Georginas, Auriculas, Primulas and Delargonimus".

Since 1840 KRELAGE's nursery was the largest of Haarlem. His place was repeatedly visited by the Royal family, and such visits were very frequent since.

A well known french horticulturist, M. Jacquin, published a description of KRELAGE's nursery in the „Annales de Flore et de Pomone" of 1844. The author was particularly struck with a perspective view of tulip beds, „dont l'effet m'a tellement émerveillé que je me suis décidé à vous en envoyer une description. Une pareille disposition produit un coup d'oeil à la fois admirable et séduisant". After having given an extensive description of the tulip plantation the french horticulturist continues: „Quand on jette ses regards sur cette longue ligne émaillée des couleurs les plus riches et les plus variées, et où les nuances rangées dans un ordre favorable à la perspective, se marient les unes aux autres, on croit voir à ses pieds se dérouler le plus admirable tapis que puisse imaginer l'art si perfectionné des Gobelins, ou se dresser devant soi la réalité de ces exagérations idéales des contes de fées ou des Mille et une Nuits, et la pensée étonnée se recueille pour s'assurer que ce n'est point une illusion".

This enthusiastic description proves that KRELAGE was not only a clever business man and a skilful cultivator, but also an aesthetic, thus combining the three chief capacities that are indispensable to success in the horticultural line.

Many new varieties were raised and introduced by him not only in Hyacinths, but also in Amaryllis, early Gladioli, Cyclamen and other bulbous plants. KRELAGE's early Gladioli were mentioned by Dr. Lindley in The Gardeners' Chronicle of 1844 in these terms: „These seedlings appear to be crosses between *G. cardinalis* and *G. blandus*, the former variety predominating most in the offspring. They are very beautiful like all such crosses. The colours range from very pale red to a deep rich vermillion, *Seedling No. 71* is a rich, splendid and distinct colour and *Lord John Russell*, *Prince Albert* and *Queen Victoria* are very good varieties of a pale colour. We should say that *seedling No. 71* is the cream of the batch. All are wonderfully well grown. A selection of the most distinct varieties would be acceptable to any garden".

Flower shows were not numerous then, but whenever there was held one in Holland or in the neighbourhood, E. H. K. was a successful exhibitor. At 34 shows he obtained 65 medals, a very respectable quantity for those days.

When his son became of age, the firm was continued under the style of E. H. KRELAGE & SON since 1850. Five years later the founder died, generally recognized to be the first representative of the bulb growing industry.

(To be continued in next year's bulb catalog).

Mr. J. A. DE VEER

100 William street, Woodbridge Building

NEW YORK.

Krelage's sensational new Tulips.

»Of late years..... few novelties, beyond the new Darwins that Messrs Krelage & Son have annually introduced, have come before the public. But it is not going to be so for ever. Seedling raising has been quietly and unostentatiously going on both in Holland and at home. Three examples which Mr. Krelage exhibited before the committee leave no doubt about the result of his work. They are named lily flowered tulips, but readers will have a better idea of what they are like, if I say they are much after the style of *retroflexa* or *elegans*, etc.

The Rev. *Joseph Jacob* in »The Garden" May 16th, 1914.

We have the greatest pleasure in offering a series of the new tulips referred to above. Our object was to obtain varieties of the charming *retroflexa* shape in the brilliant colours of the Darwin tulips. The results of some were exactly what we anticipated, while also a great many other tulips of absolutely novel appearance and unrivalled beauty were produced. They have now been sufficiently propagated for being offered in limited quantity. The whole series was twice awarded a *Gold Medal* by the General Bulb Growers' Society of Haarlem during the season 1914, several varieties obtained awards of Merit and *Sirene* when shown in London was at once distinguished by the rare First Class Certificate.

All these tulips are May flowering, and of vigorous constitution.

For list and descriptions of varieties, see next page.

1. SIREN

KRELAGE'S FIRST LILY FLOWERED TULIP.

(*retroflexa* × *Darwin* var.)

First Class Certificate, R. H. S. London 1914.

»Very beautiful it is. The flower is of great substance and it is of a lovely silvery rose shade, the exterior being of a deeper tone than the interior".

The Garden.

»Perhaps most wonderful of all were some tulips shown by Messrs E. H. Krelage & Son of Holland. They were dark pink in colour and in shape looked more like a tiger lily".

Daily Graphic.

»The new Tulip Siren, with soft rose reflexed petals, both shape and shade being quite new, attracted much attention".

Daily Mail.

First Class Certificate, G.B.G.S. Haarlem 1914.

»A handsome and distinct new tulip and one of the first of a new section which has been christened »lily flowered«. It is derived from crossing *Tulipa retroflexa* with a pink *Darwin* variety, and the result is a sturdy growing form with large, substantial flowers that still retain the form and elegance of *retroflexa*, all the segments reflexing a little at the tips. The colour is rich cerise pink, with pale pink at the margins of the segments and a white base".

The Gardeners' Magazine.

Price: \$ 5.00 each.

2. ADONIS,

long stemmed lily flowered tulip, long shaped flower with reflexed petals, vivid rosy red. *Award of Merit, Haarlem 1914.*

\$ 3.00 each.

3. ALCMENE,

medium high stem. Very fine regular flower, soft cherry red with satiny shining outside.

\$ 3.00 each.

4. AMBROSIA,

long stemmed variety, very large flower, inside salmon orange outside shaded lilac rose. *Award of Merit, Amsterdam 1915.*

\$ 2.50 each.

5. ARGO,

long stemmed variety, globular flower, golden yellow mottled red.

\$ 1.25 each.

6. ARTEMIS,

long stemmed lily flowered tulip, elegantly reflexed petals, bright carmine rose with pure white base. *Award of Merit, Haarlem 1914.*

\$ 2.50 each.

7. DIDO,

long stemmed variety. Very large flower, inside bright orange, with yellow base edged black, outside brilliant orange red with bright orange yellow edge. *Award of Merit, Haarlem 1914.*

\$ 3.75 each.

8. ELYSIUM,

medium high, very large flower, light carmine rose with silver reflexion.

\$ 1.25 each.

9. EMPEROR,

long stemmed variety, very large flower, vivid crimson with slight carmine shading.

\$ 2.00 each.

10. IDYL,

medium high, charming flower, vivid rose, inside soft salmon rose.

\$ 1.25 each.

19. The complete collection of Krelage's 18 new Tulips, one of each, \$ 35.00.

20. 12 new Tulips, one of each of the following vars., viz: Sirene, Adonis, Alcmene, Ambrosia, Argo, Artemis, Elysium, Emperor, Idyl, Mentor, Nectar and Pearl, \$ 20.00.

21. 6 new Tulips, one of each of the following vars., viz: Sirene, Artemis, Elysium, Idyl, Mentor and Pearl, \$ 10.00.

11. LEDA,

very robust variety, large bold flower of a unique intense rosy red with warm rose edges. Superior in every respect.

\$ 4.00 each.

12. MARVEL,

a very distinct, sweet scented variety, inside old gold outside salmon rose edged yellow. *Award of Merit, Haarlem.*

\$ 2.00 each.

13. MENTOR,

long robust stem, flower deep velvety brown, black base with yellow border.

\$ 1.25 each.

14. NECTAR,

very large flower with slightly reflexed petals, vivid carmine red with pure white base.

\$ 1.25 each.

15. ORIENT,

large bold flower of a remarkably colour. Inside salmon with bright rosy carmine reflexion, outside light rosy carmine with orange red edges, a very characteristic but aesthetic combination of colours. *Award of Merit, Amsterdam 1915.*

\$ 3.00 each.

16. PEARL,

medium high, elegant long flower of a delicate light rose shade.

\$ 1.25 each.

17. ROCOCO,

medium high, effectively flamed white and violet on light purplish red ground.

\$ 1.25 each.

18. ROSE BUD,

long stemmed variety of a vivid rose colour. The flower when in bud exactly suggests a rose bud.

\$ 2.50 each.

Hyacinths in the open ground.

HYACINTHS.

I. Hyacinths for the garden.

The Hyacinths offered for garden use must not be used for forcing, except the Miniature Hyacinths. **HYACINTHS IN BEDS OR BORDERS** should be planted from October 1 till December in case of need somewhat later, which however is not to be recommended. The soil must be light and sandy; the best material is a well prepared mixture of garden soil, sand and old cow dung. Other manure or fresh cow dung must not be used. The bulbs should be planted somewhat over 3 inches deep and about 5 inches apart, Miniature Hyacinths excepted, that are planted 3 inches apart or less. The bulbs are covered, before frosts set in, with dead leaves, reeds or any such light material, 3 inches thick. In spring, when heavy frosts are over, the cover is to be taken away.

AFTER THE FLOWERING PERIOD the flower stalks are cut off and the bulbs remain in the ground until the leaves die off. Take the bulbs up, dry and clean them. Bulbs which have once been used for forcing purposes, either in pots or in vases and even those planted out-doors, do not produce large flowers the next year, and, as a rule, must only be used in an out-of-the-way corner of the garden or in the lawn.

Miniature Hyacinths for the garden.

The Hyacinths offered under this name are young bulbs that produce small elegant spikes which are well adapted to the present taste and fashion. We furnish this quality assorted to color. These bulbs should be planted 3 inches apart or less; indeed they may be planted without any distance and will so produce a most brilliant effect.

N.B. Not less than 25 bulbs of each colour are furnished at the above rates.

Cheap Hyacinths for bedding.

We furnish Hyacinths for this purpose either in named varieties, our selection, or separate colours, unnamed, supplying the whole quantity of a certain colour in one variety only, thus securing the best effect for regular beds and borders.

SEPARATE COLOURS (<i>unnamed</i>)				NAMED VARIETIES (<i>our selection</i>)			
	(of one variety only)...	Doz.	100		Doz.	100	1000

42 pale blue	» » » »32	2.10				

II. Hyacinths for forcing.

The Hyacinths for forcing should be of superior quality. Therefore the quality for forcing may also be used for the garden, but garden Hyacinths must not be forced.

HYACINTHS FOR POTS The bulbs may be planted in October, and the pots should be 4 or 5 inch pots; fill the pots with a mixture prepared in advance and consisting of four equal parts, viz: good light garden soil, leaf mould, pure old cow dung and pure sand, put the bulb into it, leaving the top visible, and press the soil firmly round the bulb. Water the pots once freely, put them in a corner of the garden protected against frost, and cover them with soil, ashes, or leaves, so that the pots are entirely hidden. If there is no garden, the pots may be placed in the cellar or similar frost free cool *dark* room, till the roots have sufficiently developed. After about five or six weeks the pots may be removed to the light, by putting them in the greenhouse or drawingroom. The atmosphere must not be too dry and the temperature moderate in the first days and always regular. Plenty of water may be supplied now, according to the needs of bulbs.

HYACINTHS IN VASES. The single varieties especially are well adapted for this purpose. The vases are filled with pure rain water, so that the roots are immersed in it; the bulb itself must never be in contact with the water. The vases are first kept in a cool dark case or room, protected from frost, till the roots have sufficiently developed, and afterwards removed to the light, in a frost free apartment of constant temperature and where they can have a sunny and not too dry situation. The evaporating water should be changed by fresh of the same temperature. An addition of a few grains salt will keep the water clear and pure.

Miniature Hyacinths for forcing.

These Hyacinths produce lovely, elegant flowers of miniature shape. They produce a splendid effect when potted in shallow pots, a dozen or more bulbs of one variety in a pot, the handsome flower spikes, especially in light colours, being exceedingly attractive. These miniature Hyacinths are becoming general favorites, as they meet so very well the taste of our days.

For colours and prices, see page 5 (No. 22—29).

Best mixed Hyacinths for forcing.

We think it superfluous to remark that mixed Hyacinths should only exceptionally be used for forcing and of best quality only for this purpose. Hyacinths to name are always to be preferred for pots and forcing.

258 **ROMAN HYACINTHS, single white for earliest forcing.** For prices please apply to New York agency. *The supply being doubtful, we cannot guarantee the execution of any order on the above.*

TULIPS.

1916, February 21 (Haarlem): GOLD MEDAL for forced Darwin tulips.
 1915, February 22 (Haarlem): GOLD MEDAL for forced Darwin tulips.
 1914, May 4 and 18 (Haarlem): TWO GOLD MEDALS for new Tulips.

In beds or borders tulips are planted in autumn until December; it is however preferable to plant them earlier, but we cannot recommend spring planting. The bulbs are planted 4 inches deep and 3 inches apart.

In vases tulips are treated exactly in the same way as Hyacinths.

In pots ordinarily three bulbs of the same variety are put together in the same pot.

The treatment for all classes of garden Tulips is nearly the same. „Darwin” Tulips may be planted at a somewhat larger distance from each other than as given above.

The soil Tulips require is practically the same as for Hyacinths.

Single early Tulips.

Single early tulips, like the double ones, are very well suited for planting in groups, in beds, etc. They are all well adapted for forcing. The earliest varieties are marked *e*, those late flowering *l*, the others are medium. The numbers *in italic* before the names indicate the height of the varieties in inches.

Earliest Duc van Tholl varieties.

Double early Tulips.

Double flowering Tulips are of robust growth and the flowers themselves are in many cases as large as small double Paeonies and last somewhat longer than those of single Tulips. Only the *earliest* flowering double varieties are well suited for forcing.

For late double Tulips see page 15.

e earliest varieties, *l* later flowering; the numbers indicate the height of the varieties in inches.

May flowering Cottage Tulips.

Since the Darwin Tulips proved such a success, the late Tulips have become general favorites. Old garden tulips, forgotten and neglected, were collected and propagated again, and so we now have an extensive set of beautiful May flowering Tulips which may be used to their advantage in connection with the glorious Darwins. The latter do not include a few colours which just among the old Cottage Tulips are well represented.

Dutch breeder Tulips.

Another group of late Tulips which has come to the front again in consequence of the popularity of the Darwins. The old dutch breeder tulips have a particular charm of their own, especially in the unique range of color in brown, orange, yellowish and buff, which are not to be found among the Darwins.

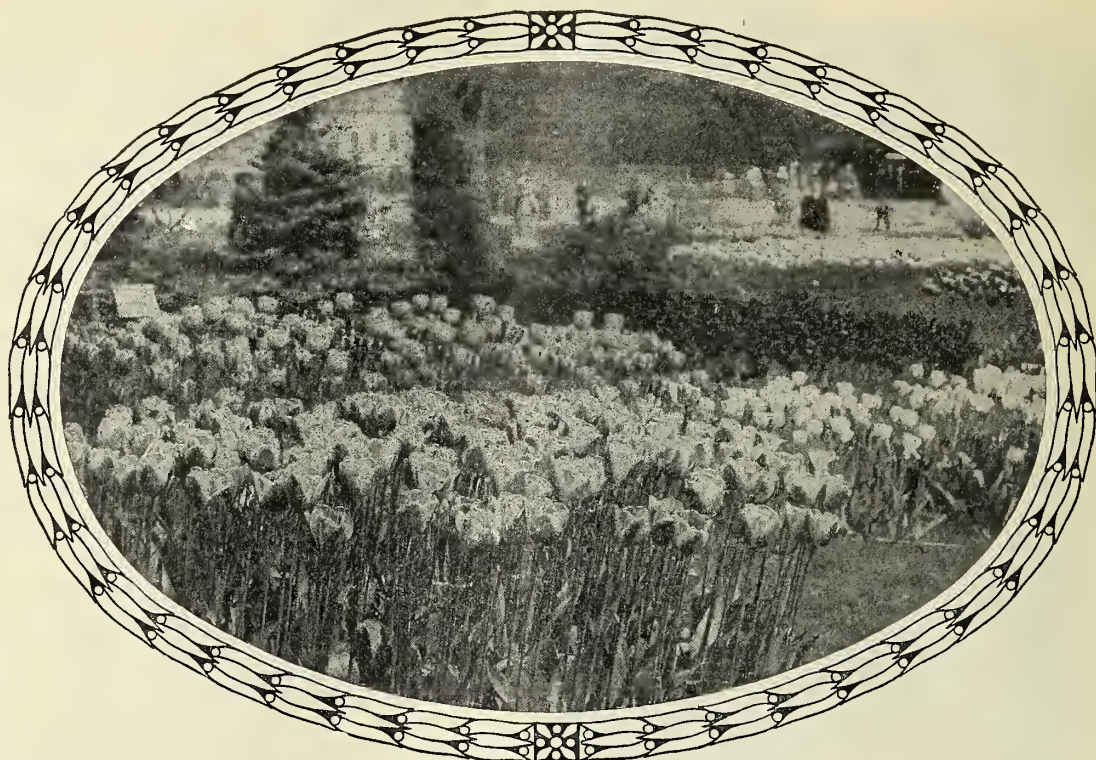

The flowers are large and borne on long rigid stems. These Tulips are beautiful garden plan's, and may also be forced.

	Each	Doz.		Each	Doz.
616 Albion (<i>Ada</i>), pale lilac blue.....	\$.20	\$ 1.80	634 L'étincelante , deep claret, white base, very fine..	\$.30	\$ 2.50

Darwin Tulips.

»The strong growing race of breeder Tulips known as »Darwins« was first introduced into commerce in 1889 by Messrs. KRELAGE & SON of Haarlem..... That they will prove to be the twentieth century tulips there is not a shadow of doubt. Twenty five years ago they were practically non-existent; to-day their importance is greater than that of any other type, and neither the brilliance of the Mid-Asian importations nor the exquisite refinement of the florist varieties can vie with them in popular estimation.«

From: Rev. Joseph Jacob, „Tulips.”

Krelage's Darwin Tulips at the Haarlem Jubilee Flower Show.

DARWIN TULIPS IN ASSORTMENTS.

661 DARWIN TULIPS SUPERIOR MIXED.

\$.16 per doz.

\$ 1.10 per 100.

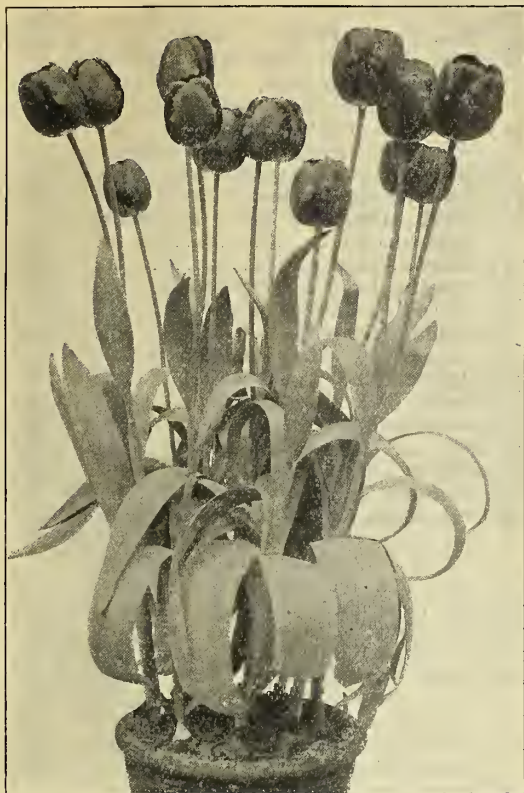

\$ 10.00 per 1000.

DARWIN TULIPS, THAT HAVE RECENTLY COME TO THE FRONT.

The varieties below are all of exceptional merit. *Chas. H. Marot*, *Eclips*, *La Fiancée*, *Prince of Wales* and *Princess Mary* were the champions in our exhibit of forced Darwins at Haarlem on February 21, 1916. The other varieties are probably the best in their respective colours. The whole set is superior in every respect.

662	<i>t</i> APHRODITE (KRELAGE), broad globular flower, silvery pure rose, very fresh and clean (<i>Award of Merit, Amsterdam 1915</i>)....	Each	\$.75	669	<i>t</i> MYSTERY , (KRELAGE), enormous flower on high stems velvety dazzling black, as black as <i>La Tulipe noire</i> , of a most superior faultless shape	Each	\$.75
663	<i>m</i> CHAS. H. MAROT (KRELAGE), violet, when forced charming dark lilac, pure white base (<i>Award of Merit, Haarlem 1916</i>) \$ 2.00 doz.	.25		670	<i>t</i> ORANGE PERFECTON (KRELAGE), medium sized flower on tall stem. Doubtless the most dazzling salmon orange ever seen in any Darwin or other tulip, absolutely distinct75	
664	<i>t</i> ECLIPS (KRELAGE), well shaped flower of a uniform velvety maroon, excellent forcing var. (<i>First Class Certificate Amsterdam 1915. Award of Merit, Haarlem</i>) ..	\$ 1.00 doz.	.15	671	<i>m</i> PRINCE OF WALES , (KRELAGE), excellent flower of a dazzling pure red, a colour which compares favorably even with the best red Darwins (<i>First Class Certificate, Haarlem 1916</i>).....	.50	
665	<i>t</i> GIANT (KRELAGE), enormous fl., deep violet, rather early flowering. (<i>First Class Certificate, Haarlem, F.C.C. Amsterdam</i>). \$ 2.00 doz.	.25		672	<i>m</i> PRINCESS MARY (KRELAGE), clear and vivid rose colour, edged lighter, excellent forcing variety. (<i>Award of Merit, Haarlem 1916</i>).....	.50	
666	<i>m</i> JUBILEE (KRELAGE), deep purplish violet, a distinct charming var. (<i>Award of Merit, Haarlem and Amsterdam</i>)....	\$ 2.00 doz.	.25	673	<i>t</i> THE BISHOP (KRELAGE), brilliant deep violet, considered the very best in its colour; scarce in consequence of heavy demand..	.50	
667	<i>t</i> KING GEORGE V (KRELAGE), large, bright dazzling red, a glorious colour \$ 2.00 doz.	.25					
668	<i>t</i> LA FIANCÉE (KRELAGE), large rosy lilac flower. When forced a delicate pink colour, exceedingly charming. (<i>Award of Merit, Haarlem 1916</i>)..	\$ 2.00 doz.	.25				

674 **The twelve superior varieties** above, one bulb of each \$ 3.75.

At the Haarlem forced late tulip show on February 21st. last we showed a group of 70 large pots of forced Darwin tulips, almost all different varieties. The above pictures representing **Fra Angelico** and **Herzogin von Hohenberg** prove how well the Darwins may be forced as early as February, without wanting any tie.

THE CREAM OF THE DARWIN STANDARD VARIETIES.

Height: *t* tall *m* medium *d* dwarf.

Rembrandt Tulips.

Having dedicated our strain of superior breeder Tulips to the memory of Charles Darwin, we again had the advantage of introducing a new strain of artistic, broken (striped) Tulips under the suggestive name of „Rembrandt” Tulips.

The colours are difficult to describe, there are dazzling carmines, and blacks and crimsons, there are pale mauves and soft roses and lilacs, intense amaranths and violets and scarlets, all on a pure white or soft shaded ground, no yellow bizards being among them. The contrast between the soft and pale ground colours and the intensively coloured markings is a special feature of these Tulips.

Parrot Tulips.

«For a bold arrangement of strong coloring, few flowers give so gorgeous an effect and they twist and tumble about in a way that help their manipulator to dispose them in natural-looking, informal-looking, informal groups." THE GARDEN.

Parrot Tulips are a constant monstrous race of *T. Gesneriana*, of the highest artistic beauty and charm. Sometimes they fail flowering; the bulbs however we offer below having flowered in our nurseries are guaranteed true to name and sure to flower next spring. About KRELAGE's Parrot Tulips the Editor of the *Gardeners' Chronicle* says: "... in size, form, and color, exceeding anything we have seen in this way before. Gorgeous is the only suitable word to describe them."

1st. prize R. H. S. Daffodil Show, London.

First Class Certificate, Royal Horticultural Society, to Krelage's white trumpet Daffodil **Mrs. Ernst H. Krelage**.

Award of Merit, General Bulb Growers' Society, to Krelage's yellow trumpet Daffodil **Candlestick**.

The best time for planting Narcissi is September—October. Dry bulbs are sent out from August 1 to November 1.

For drawing-room culture the species with the largest bulbs are planted three or five together in the same pot, five to fifteen smaller bulbs can be put in one pot.

In beds or borders Polyanthus Narcissi and the somewhat delicate Narcissi of other groups should be planted 5 inches deep and 6 inches apart. In winter they must be covered with leaves, about 8 inches high. The more resistant varieties are planted 4 inches deep and 5 inches apart and need a cover of only 2 inches in winter.

CLASSIFICATION OF DAFFODILS.

We have adopted the classification of the R. H. S. Daffodil Classification Committee. — The eleven divisions are: I. *Trumpet Daffodils* (yellow, white and bicolor vars.), II. *incomparabilis*, III. *Barrii* (incorporating *Burbidgei* and *Engleheartii*), IV. *Leedsii*, V. *triandrus hybrids*, VI. *cyclamineus hybrids*, VII. *Jonquilla hybrids*, VIII. *Tazetta*, IX. *poeticus*, X. *double varieties* and XI. *Various*.

Polyanthus Narcissi.

Although the Polyanthus Narcissi have lately been somewhat eclipsed by the new forms of other sections of Narcissi, they deserve to maintain their position as excellent pot plants. Indeed they may easily be forced in bloom very early, and they may be grown either in pots in soil or in bowls in fibre or even in water in the Chinese way. They are also lovely garden plants, but being not so hardy as other narcissi, they want careful protection during winter.

The Polyanthus Narcissi have been improved in later years by the introduction of large flowering varieties, such as *Dr. Holland*, *Constance* and *Princess Juliana*, that form the link with the new section of *Poetas* varieties. The latter section has a merit of its own, but cannot replace the old bunch flowered narcissi.

(Supply of No. 1094—96 doubtful).

Narcissus poetaz.

Originated from a cross of *Narcissus poeticus* and the Polyanthus Narcissi this strain may be considered to be an improved race of the old Polyanthus Narcissi. Indeed the new varieties are distinguished by many-flowered stems and larger flowers, sweet scented, but moreover they are perfectly hardy and not so weak as the old Polyanthus Narcissi during winter. The *Poetaz* varieties are also well fit for pot culture and for forcing.

Single Anemones.

Double Anemones.

Caen Anemones.

Anemones.

Tuberous Anemones flourish in any garden soil which is well drained, safe, deep, light and not too sandy; the roots should be planted 4 inches apart and 1 or 2 inches deep. Herbaceous Anemones are sent out in autumn as well as in spring. They are best planted in autumn and scarcely want almost any care.

Double Anemones. (*Anemone coronaria fl. pleno*).

Crocuses in bowl.

CROCUS.

„The Crocus from its brilliancy, is indispensable, and the hardier forms are able to take care of themselves. While we have proof enough that Crocuses grow well in meadow grass on a large scale, they seem particularly suitable for growing under groves of trees, their growth coming before the trees spread forth their leaves.”

Crocus bulbs are sent out from August 1 till November 1, occasionally till December. In beds, plant bulbs 2 1/4 inches deep and 4 inches or less apart. Force them slowly.

EREMURUS.

Highly ornamental plants, that have proved quite hardy. The stems attain to a height of 8 feet and more and during the flowering period are covered with lovely star shaped flowers of white, pink, and other shades. When once established the plants want scarcely any care. It will be good to cover the plants when they appear above the ground, in order to protect them against the early frosts in spring. *Eremuri* are not fit for pot culture.

GOLD MEDAL, ROYAL INTERNATIONAL HORTICULTURAL EXHIBITION LONDON 1912.

Extracts of press reports on this exhibit.

Around the sides of the court were cut flowers, conspicuous amongst them being great sheaves of spikes of *Eremurus robustus*, *E. Elwesii* and *E. himalaicus* and as a carpet were masses of different kinds of lilies and Ranunculuses of various shades of reds and crimson.

The Gardeners' Chronicle.

E. H. Krelage & Son, Haarlem, showed fine Ranunculus, Iris and *Eremurus* in great masses.

The Horticultural Trade Journal.

Following round we came to a grand lot of *Eremuri*, lilies and wonderful Turban Ranunculus from Messrs. E. H. Krelage & Son, Haarlem.

The Gardeners' Magazine.

In Messrs. E. H. Krelage & Son's group we mention splendid *Eremurus himalaicus* and *robustus*, admirable Turban Ranunculuses, and very remarkable *Allium Rosenbachianum* and *karatawiense*.

Translated from *Le Jardin*.

ERYTHRONIUMS.

(Dog Tooth's Violets.)

„The Garden” says about the improved Dutch forms of *Erythronium Dens canis*:

„The Dutch varieties of *E. Dens Canis* are very beautiful and we hope to see them more common in gardens as they are not difficult to grow if the soil is light and moisty. Some of the forms deserve all praise, especially those with yellow at the base of the segments and violet colored anthers. Why are not such exquisite flowers grown in good gardens? It is difficult to say, unless possibly they are unknown, but they are invaluable, the flowers large, very pleasing in their shades of colors from rose purple to white.”

FRITILLARIA.

(Snake's-head Fritillarias and Crown imperials).

The Crown imperials, when well grown are as much as four feet in height. The great fleshy bulbs have but a very short resting period and therefore it is necessary to buy them as early in the season as possible, and no time should be lost in replanting them where they are intended to remain. When once well established the bulbs may be left in the ground for years.

Snake's-head Fritillarias (*Fr. latifolia* and *Meleagris*) for forcing are planted 3—5 bulbs in 5 inch-pot. In open ground they require planting 3 inches deep. Planting time early in autumn; in winter covering 2 inches thick.

All Fritillarias are to be recommended for the wild garden.

Early flowering Gladioli.

The early flowering Gladioli belong to various races and are all highly recommended for cutting purposes. They flower in July before the *gandavensis*, *Lemoinei* and *nanceianus* Gladioli. They want planting in autumn. 4 inches deep and 4 inches apart and should be covered in winter 3 inches thick. This cover must be left till end of spring. These Gladioli are also well adapted for pot culture and may be forced slowly.

DWARF GLADIOLI.

The dwarf Gladioli, which belong to several species, such as *cardinalis*, *blandus*, etc. are characterized by elegant, well opened flowers, which, as a rule, are ornated with conspicuous blotches on the three lower petals, mostly consisting of a white centre, shaded off lilac and heavily bordered carmine.

Hippeastrum (Amaryllis).

Our Amaryllis strain combines the best qualities that are now considered to constitute an ideal flower. The spikes as a rule carry four flowers, of round shape, overlapping, expanded, short tubed. The colours range from pure white to almost blackish crimson, and the selfcoloured varieties rival with striped and mottled ones. Our selection is now doubtless among the very best known in the trade. Besides our celebrated show hybrids, we beg to offer cheap bulbs, which have originated from the same seedlings and therefore may be ordered in full confidence.

The horticultural press has repeatedly made reference to our strain in very flattering terms.

Culture: Amaryllis are hot house bulbs and do best, when treated in that way. The hybrids of the present day being more vigorous than the old ones, do not want so much heat and may successfully be flowered in the conservatory and even in the drawing room.

Bulbs are ready from August till April.

IRISES.

Dutch Irises.

This new class of Irises may best be described as a strain of early flowering giant Spanish Irises. Indeed the new varieties flower two to three weeks earlier than the earliest Spanish variety; they have much larger and very substantial flowers in all the many shades of colour known in the Spanish Irises. The Dutch Irises want the same treatment as the Spanish and English varieties; they are best planted end of September and must be protected against frost in very cold districts.

Spanish Iris (I. Xiphium).

The Spanish Irises have smaller flowers than the English varieties. but are much more varied in color. The flowering period starts two weeks before that of the English Irises. Planting time August to October. Plant them 3½ inches deep and as much apart.

The named varieties offered below — which are only a small part of our rich collection — are chiefly new, large flowering forms of new, very pure colours, highly surpassing the older varieties.

English Irises.

English Irises (I. xiphioides.)

"A box of new varieties of this showy and easily grown hardy flower, sent by Messrs. E. H. KRELAGE & SON of Haarlem, represents it in quite a new light, the excellence of the flowers being beyond that of the old kinds. Indeed so large are they, and so rich in colour are the darker ones with their spreading oval falls, that they forcibly remind us of the beautiful *Iris Kaempferi* and seem to suggest a way out of the difficulty which some experience in growing that handsome species, viz. to abandon it and take to these new forms of *Iris xiphioides* which require little attention and never fail, provided they get a good supply of water until their flowers are over." GARDENERS' CHRONICLE.

Various bulbous Iris (Juno, Xiphium, etc.)

These Irises are *all quite hardy and valuable as plants for the open border. Reticulata varieties develop their flowers already in December and January when the fields are covered with snow and ice. These Irises are also fit for forcing and so they may produce a handsome drawing room decoration in pots.

Oncocyclus and Regelia Iris (Cushion Irises).

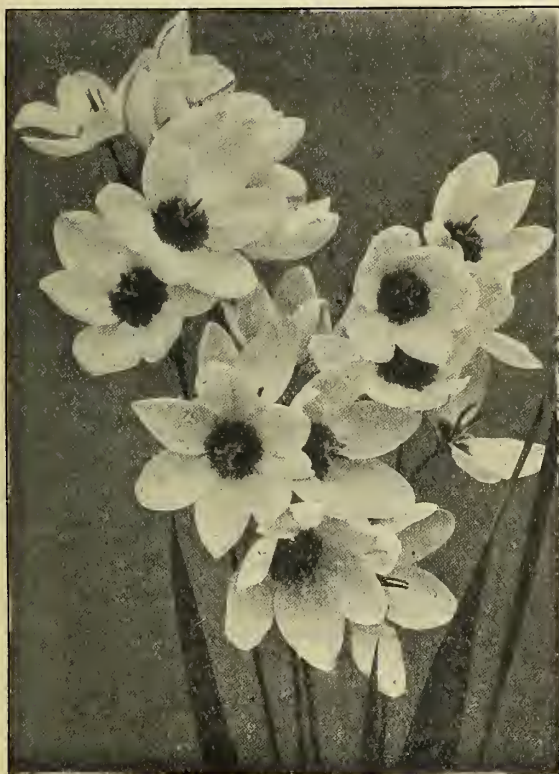

Although not bulbous, the Oncocyclus Iris (*I. susiana* etc.) are mentioned here and can only be sent out in autumn. They should be planted in the open air as late as possible; they want a rather thick cover and after the flowering period in spring, should be protected against rain, in order to become ripe and dry as soon as possible. They do not want manure or only very moderately.

A beautiful new Chinese Lily: *L. regale*.

LILIES.

Culture. It is impossible to fix general rules for the cultivation of all kinds of Lilies: but without exception they prefer a half-shady, moist position, protected against the hot sun. The varieties of *speciosum*, *Thunbergianum* and *umbellatum* and a few other species will do in every good garden soil. The *auratum* lilies and many *Martagon* species prefer loam mixed with sand and leaf soil, most american species do best in peat and sand. Almost all lilies are hardy and some are excellent for forcing, especially the well known Japanese *longiflorum*.

All the Lilies grown for sale in Holland may be obtained by the middle of October or beginning of November, and most of them being thoroughly hardy, can be planted at once, except in the case of the Japanese species. In nearly all soils these can with a few exceptions be planted out permanently before the middle of November. The common white lily, *L. candidum* must be planted between the middle of July till the middle of August".

GOLD MEDAL
Int. Hort. Exh. Hamburg.

Peonies.

GOLD MEDAL
Haarlem, June 1915.

Herbaceous Chinese Peonies are generally admitted to be the most decorative and ornamental plants of the early summer. They are the most beautiful object in gardens and parks at that period of the year, and their flowers are the best available cutting material. **The best effect in gardens** is to be obtained by planting solitary plants at regular intervals, or by grouping in the lawn. **In parks** large groups may be used as a foreground to shrubs and trees, or as large masses in beds on the lawn. **As cutting material** the Chinese Peonies can scarcely be surpassed, and no flower beats them when a loose arrangement is wanted in a large vase. Each flowering stem produces from 3 to 5 flowers, and most varieties are very free bloomers. It is well known that these Chinese herbaceous Peonies are **perfectly hardy** and do not want to be removed before the fourth year

THE PEONY AND WE. The Peony has become such a general favorite of the flower loving public, that every particular concerning its history is sure to be read with interest. Long before the Peony occupied the prominent position in American gardens of the present day, our firm cultivated one of the best and perhaps the most complete collection in the world.

The first medal the founder of the firm ever obtained, was awarded for a *Paonia Moutan* shown in flower in February 1833. The opportunity for showing Peonies at horticultural shows has always been very scarce, as the flowering period does not coincide with the usual dates of shows. Nevertheless E. H. Krelage & Son were successful exhibitors, whenever they found an occasion for exhibiting their unique collection of Chinese Peonies. It was first awarded at the International Agricultural Show at Bremen in 1874, and again in 1886 at a meeting of the Royal Horticultural Society of London, when the *Journal of Horticulture* called the collection "superb" and "most varied in colours".

At the great international horticultural exhibition of Hamburg in 1897 E. H. K. & S. showed a group of 40 metres length, for which a Gold Medal was awarded; and how the collection has always maintained its high standard of excellence, proved the Gold Medal, which was obtained at a show of the Haarlem Bulb Growers' Society in 1915, as the highest award in competition with the most renowned Peony growers of Holland.

The Bulb District of June 23, 1915 in a report on the Haarlem Peony Show says: „The leading exhibitor again was E. H. Krelage & Son, Haarlem, whose group of nearly 80 varieties realized the richness of this now so very popular genus of plants. The exhibit was very carefully arranged and the numerous visitors all agreed that the exhibit was the most perfect that can be shown in this respect. The firm's official who had arranged the group was congratulated from all sides with the splendid effect he had obtained, and indeed deservedly so".

We often published special Peony catalogs and issued a very complete list in three languages in 1891, containing historical and botanical notes, and a descriptive list of five hundred varieties. This catalog which is absolutely out of print is considered a valuable contribution to the literature on the Peony and has freely been used for later publications in all countries.

When M. Crousse, one of the foremost french Peony growers, in 1883 named one of his best seedlings *Monsieur Krelage* he paid a well deserved tribute to our late partner, J. H. K., who has done so much to popularize and push the Chinese Peony as a garden flower.

WHY TO BUY PEONIES IN HOLLAND? Because Holland is the ideal home for the Chinese Peony on account of its soil and climate and because they can be grown there cheaper and probably better than anywhere else.

TO ORDER PEONIES FROM KRELAGE'S means to get strong, sound plants from an authentic standard collection which for one hundred years has yearly been built up from the original stocks of the originators, thus affording the best guarantee for obtaining true to name plants and for avoiding disappointment.

LITERATURE. Many papers and booklets on the Peony have been published in America, that have contributed to make these flowers better known and appreciated. The historical facts concerning the origin of the varieties can only be traced from the old catalogs issued by their originators. As a rule these catalogs have not been kept, and the Krelage library is perhaps the only place in the world where they can be found. The growers' names and the dates of introduction were published for the first time in Krelage's Peony Catalog issued in 1891, and are since to be found in the American publications on this flower.

J. H. Krelage
(1824-1901)

whom M. Crousse dedicated one of
the finest Peonies ever introduced.

- 1687 **Adolphe Rousseau** (DESSERT & MECHIN 1890), *SD.*, erect, tall, large, purple-garnet, early, for landscape, 75 cts.

1688 **Alba plena**, *B.*, one of the oldest forms, rosy white, large, midseason, 15 cts.

1689 **Albâtre** (CROUSSE 1885), *R.*, strong, tall, free bloomer, large, milk white, midseason, extra, 30 cts.

1690 **Albert Crousse** (CROUSSE 1893), *B.*, strong, tall, bl. flat, large, rose white flecked slightly crimson, late, 75 cts.

1691 **Alexandre Verschaffelt** (PARMENTIER 1850), *R.*, medium height, globular bloom, purple magenta, 35 cts.

1692 **Alsace Lorraine** (LEMOINE 1906), *SR.*, tall, strong, very large, flat, cream white, late, \$ 2.50.

1693 **André Lauries** (CROUSSE 1881), *R.*, medium height, strong; dark pink with silvery reflex. late, 30 cts.

1694 **Auguste van Geert** (PARMENTIER 1850), *R.*, dark violet red, 25 cts.

1695 **Auguste Villaume** (CROUSSE 1895), *R.*, erect, tall, large, violet rose, late, 75 cts.

1696 **Bayadère** (LEMOINE 1910), *R.*, medium height, large globular fl. cream white, extra, midseason, \$ 3.50.

1697 **Boule blanche** (1892), good pure white, 30 cts.

1698 **Boule de neige** (CALOT 1867), *SR.*, erect, tall, large, milk white, guards and center flecked crimson, early, extra, 25 cts.

1699 **Canari** (GUÉRIN 1861), *B.*, medium size, white with pale pink tint, late, 15 cts.

1700 **Candidissima** (CALOT 1856), *R.*, pure white with sulphur centre, early, 30 cts.

1701 **Cérés** (VERDIER 1860), *B.*, tall, strong, large, loose, pale lilac rose, early, 35 cts.

1702 **Charlemagne** (CROUSSE 1880), *R.*, very strong, large lilac white, bluish centre, late, 25 cts.

1703 **Charles Binder** (GUÉRIN 1860), *B.*, medium size, magenta, late, 35 cts.

1704 **Claire Dubois** (CROUSSE 1886), *R.*, erect, tall, strong, very large, violet red tipped silvery white, late, extra, 75 cts.

1705 **Comte de Nanteuil** (CALOT 1858), *B.*, erect, tall, large, violet rose centre salmon pink, midseason, 35 cts.

1706 **Constant Devred** (CALOT 1868), *R.*, medium size, purplish red, late, 75 cts.

1707 **Couronne d'or** (CALOT 1873), *SR.*, large, white with yellow tints, late, 35 cts.

1708 **Cythérée** (CALOT 1856), *C.*, erect, strong, mauve rose, collar cream white, midseason, 30 cts.

1709 **Docteur Bretonneau** (GUÉRIN 1850), *R.*, strong, large, pale lilac and milk white, midseason, 40 cts.

1710 **Doyen d'Enghien** (PARMENTIER 1853), very dark violet red, 50 cts.

1711 **Duchesse de Nemours** (CALOT 1856), *C.*, strong, pure white with sulphur white collar, extra, 15 cts.

1712 **Edmond About** (CROUSSE 1885), *R.*, erect, tall, large, hydrangea pink, midseason, extra, 50 cts.

1713 **Eduis superba** (LÉMON 1824), *C.*, large, loose, dark pink, early, 30 cts.

1714 **E. G. Hill** (LEMOINE 1906), *SR.*, erect, dwarf, very large, tyrian rose, centre clear, early, extra \$ 1.00.

1715 **Emile Lemoine** (CALOT 1866), *B.*, large, rather loose, pink with slight silvery tips, late, 50 cts.

1716 **Emilie Hoste**, *R.*, free bloomer, fine creamy white, midseason, 30 cts.

1717 **Etendard du grand'homme** (MIELLEZ 1855), *R.*, tall very large, brilliant red, late, 50 cts.

1718 **Felix Crousse** (CROUSSE 1881), *B.*, strong, long, large, bright red, midseason, extra, 40 cts.

1719 **Festiva maxima** (MIELLEZ 1851), *R.*, vigorous, large, pure white, centre usually flecked carmine, midseason, extra, 30 cts.

1720 **Général Dodds** (CROUSSE 1893), *SR.*, erect, tall, strong, very large dark rose, late, 75 cts.

1721 **Gismonde** (CROUSSE 1895), *R.*, tall, globular fl., soft pink, centre rose, \$ 1 75.

1722 **Hecla**, vivid rose, 25 cts.

1723 **James Kelway** (KELWAY), *SR.*, medium height, very large, rose white, guards flecked crimson, syn. *Lady Derby*, \$ 2.00.

1724 **Jeanne d'Arc** (CALOT 1858), *B.*, strong, free, sulphur to cream white, midseason, 50 cts.

1725 **La brune** (VERDIER 1860), *SR.*, very strong, tall, large deep carmine violet, midseason, 50 cts.

1726 **La fraîcheur** (GUÉRIN 1861), rose salmon, very regularly built flower, 35 cts.

1727 **La France** (LEMOINE 1901), *R.*, erect, compact, very large, rose white, late, extra, \$ 7.50.

1728 **La tendresse** (CROUSSE 1896), *R.*, erect, strong; flat, compact bloom, milk white centre flecked crimson, \$ 1.00.

1729 **La tulipe** (CALOT 1872), *SR.*, very large, almost white shaded lilac midseason, 40 cts.

1730 **La voluptueuse** (GUÉRIN 1861), very brilliant dark violet, 35 cts.

1731 **L'élégante** (GUÉRIN 1857), vivid rose, 25 cts.

1732 **Livingstone** (CROUSSE 1879), *R.*, strong, free; large, pale lilac rose with silver tips, late extra, 75 cts.

1733 **Lord Derby**, dark red, 50 cts.

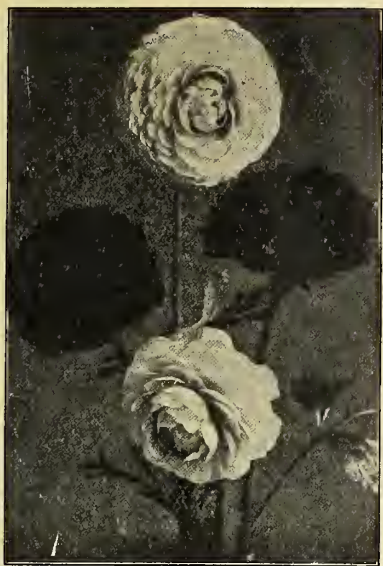

CHINESE PEONIES (*continued*).

- 1734 **Louise Renault** (CROUSSE 1881), *R.*, medium size, dark pink, centre lighter, late, 30 cts.
- 1735 **Madame Courant** (COURANT 1830), *SD.*, tall, large, bl. flat pink and white guards violet rose, 30 cts.
- 1736 **Madame Crousse** (CALOT 1866), *C.*, medium size, pure white, crimson flecks on crown, midseason, 35 cts.
- 1737 **Madame de Galhau** (CROUSSE 1883), *R.*, very strong, compact bl. delicate pink, late, 75 cts.
- 1738 **Madame d'Hour** (CALOT 1864), *R.*, strong, large, light pink, silver tipped, midseason, 60 cts.
- 1739 **Madame Emile Gallé** (CROUSSE 1881), *R.*, strong large, flat bl. lilac white, centre clear, midseason, extra, \$ 1.00.
- 1740 **Madame Forel** (CROUSSE 1881), *R.*, strong, large, light pink, silvery tipped centre, late, 30 cts.
- 1741 **Madame Geissler** (CROUSSE 1880), *R.*, very large, compact bl., light pink, 40 cts.
- 1742 **Madame Loise** (CALOT 1867), dark purplish violet, good form, 35 cts.
- 1743 **Madame Méchin** (MÉCHIN 1880), *SR.*, vigorous, purple garnet, midseason, 35 cts.
- 1744 **Madame Moutot** (CROUSSE 1892), *SR.*, erect, lyriain rose, centre clear, midseason, \$ 1.00.
- 1745 **Madame Muysart** (CALOT 1869), *R.*, erect, strong; very large, solferino red, silver tipped, late, 75 cts.
- 1746 **Madame Schmidt** (CALOT 1873), *C.*, medium height, large, very pale pink guards, slight blush in centre, late, 30 cts.
- 1747 **Madame Serret** (CALOT 1860), rosy pink, 30 cts.
- 1748 **Madame Thouvenin** (CROUSSE 1881), *C.*, lilac or carmine rose, centre more intensively colored, late, 25 cts.
- 1749 **Madame Tirard** (GUÉRIN 1840), vivid rose, 30 cts.
- 1750 **Madame Vilmorin** (GUÉRIN 1856), *R.*, rose white, centre splashed with rose; amber at base of petals, late, 30 cts.
- 1751 **Mademoiselle Léonie Calot** (CALOT 1861), *R.*, large, delicate rose white, centre tipped carmine, midseason.
- 1752 **Magnificens** (CALOT 1860), uniform carmine red, 25 cts.
- 1753 **Marguerité Gérard** (CROUSSE 1892), *SR.*, later *B.*, very strong, medium height, very pale pink fading to nearly white, late, 75 cts.
- 1754 **Marie Houillon** (CALOT 1869), *R.*, medium height, large, showy, light pink, silver reflex, late, 25 cts.
- 1755 **Marion Delorme** (GUÉRIN 1850), almost pure white, 30 cts.
- 1756 **Mireille** (CROUSSE 1895), *R.*, large, full flower, milk white, very late, 75 cts.
- 1757 **Monsieur Boquié** (PARMENTIER 1850), glowing dark rose, 25 cts.
- 1758 **Monsieur Chevreuil** (DESSERT 1893), *R.*, very strong, very large, light pink with occasional crimson fleck in centre, late, 75 cts.
- 1759 **Monsieur Jules Elie** (CROUSSE 1889), *C.*, medium height, large, pale lilac rose, guards and centre clear, early, extra, 75 cts.
- 1760 **Monsieur Krelage** (CROUSSE 1883), *SR.*, strong, erect, free, large compact bloom dark pinkish red, silver tips, late, 30 cts.
- 1761 **Nec plus ultra** (MIELLEZ 1856), *SD.*, strong, medium height, flat loose bl., pure mauve, silver tipped, midseason, 25 cts.
- 1762 **Niobé** (KRELAGE), loose flower, clear carmine rose with white reflex, \$ 2.00 doz., 25 cts. each.
- 1763 **Nobilissima** (MIELLEZ 1858), *SR.*, erect, tall; large, violet rose, centre flecked crimson, midseason, 40 cts.
- 1764 **Noémi** (FOULARD 1850), white with lilac rose shade, 30 cts.
- 1765 **Octavie Demay** (CALOT 1867), *R.*, dwarf; light pink, midseason, very valuable, 60 cts.
- 1766 **Pierre Dessert** (DESSERT & MÉCHIN 1890), *SR.*, erect, large, dark purple, silver tips, early, \$ 1.00.
- 1767 **Pierre Duchartre** (CROUSSE 1895), *R.*, very large, pale lilac pink with silver reflex, (*Award of Merit*, Haarlem 1915), \$ 1.25.
- 1768 **Pottsi alba superba** (GUÉRIN 1845), delicate rose with yellowish reflex, 30 cts.
- 1769 **Pottsii plena** (CALOT 1857), bright dark purple red, 30 cts.
- 1770 **Prince Antoine d'Aremberg** (PARMENTIER 1850), brilliant dark violet red, 25 cts.
- 1771 **Princesse Charlotte** (FOULARD 1854), soft rose, 25 cts.
- 1772 **pulcherrima** (GUÉRIN 1842), *B.*, very strong, medium height, pink, midseason, 30 cts.
- 1773 **purpurea** (GUÉRIN 1845), glowing dark purple, 50 cts.
- 1774 **rosea elegans** (GUÉRIN 1858), *B.*, tall, strong pale lilac rose, collar cream white, early, 25 cts.
- 1775 **rosea speciosa** (1840?), light violet rose, 35 cts.
- 1776 **Rouillard** (GUÉRIN 1845), self-colored dark purple, 30 cts.
- 1777 **rubra violacea** (VERDIER 1857), self-colored bright violet rose, 25 cts.
- 1778 **Sarah Bernhardt** (LEMOINE 1906), *SR.*, tall, large, flat bl., mauve rose, silver tipped, late, \$ 3.00.
- 1779 **Sidonie** (MIELLEZ 1856), *R.*, strong, very large, light pink with a few cream petals scattered through the bloom, midseason, 30 cts.
- 1780 **Solange** (LEMOINE 1907), *R.*, large globular flower, deep orange salmon with brownish shade, quite unique and extra, \$ 10.00.
- 1781 **Souvenir du Docteur Bretonneau** (DESSERT 1888), *SD.*, strong; tyrian rose, centre and guards clear, midseason, 40 cts.
- 1782 **splendida** (GUÉRIN 1850), *R.*, white faintly tinted pink, early, 25 cts.
- 1783 **Surpasse Pottsii** (FOULARD 1854), purplish crimson, fine, 25 cts.
- 1784 **Sylvie** (KRELAGE), free bloomer, very large, loose flower, soft rosy white, centre creamy white, \$ 2.00 doz., 25 cts. each.
- 1785 **Taglioni** (GUÉRIN 1850), *C.*, tall, violet rose, collar cream white, early, 25 cts.
- 1786 **Triomphe del' Exposition de Lille** (CALOT 1865), *SR.*, very strong; large, pale pink, splashed violet rose, guards lighter, midseason, 40 cts.
- 1787 **Victoire Lemon** (MIELLEZ 1858), *C.*, strong, dwarf, pale pink and cream white, late, 30 cts.
- 1788 **Zoé Calot** (MIELLEZ 1855), *C.*, very large, globular, soft pink with lilac tint, midseason, 30 cts.

Early flowering European Paeonies.

These Paeonies flower in May before the Chinese varieties and are well fit for forcing.

- 1789 **officinalis flore pleno**, purplish red, effective for groups and solitary plants.. 12 cts. each, \$ 1.00 p. doz.

Persian Ranunculus.

Ranunculus.

CULTURAL DIRECTIONS. The *Florist's Ranunculus* flourish in any garden soil, which is safe, fresh, compact, not too dry, but loamy and sandy. The tubers (claws downwards) should be planted in an open sunny position, one inch deep, and two inches apart. Press them firmly into the soil!

They can be sent out through the whole year, as the tubers of these Ranunculuses can be preserved in a dry state for a very long period.

Persian Ranunculus.

(*Ranunculus asiaticus*.)

„Scotch“ Ranunculus.

„Scotch“ Ranunculus are known since the first years of the 19th century. They are a quite distinct and very pretty improvement of the common Persian varieties. The flowers of the Scotch seedlings are peculiarly mottled, spotted and striped, very effective indeed.

Turban Ranunculus.

(*Ranunculus africanus*.)

This race has large rose-formed, self coloured flowers which appear earlier than those of the Persian Ranunculus. Exceedingly effective plants in beds, or mixed with other dwarf springflowers. Most of the varieties are known under two or more names, so *Hercules* is the same as *White Turban*, *Romano* the same as *Scarlet Turban*, etc. Some of them belong to the Persian section or are intermediate between this and the Turban race. To avoid confusion we register them under the common fancy names and as Turban varieties.

Cheap Bulbs for Masses.

The large demand for cheap bulbs, well adapted for planting in masses and borders, meadow grass and wild gardens, leads us to make a special offer of such bulbs which will do exceedingly well for the purpose. It should be observed that we cannot furnish first class bulbs at this very cheap rate; however all articles offered in this list produce lovely and pretty flowers and will be quite satisfactory, if planted in masses either in beds or in the wild gardens.

Not less than 50 bulbs of the same kind are supplied at the price per 100, not less than 500 bulbs at the price per 1,000.

Unsolicited testimonials in war time.

The following selection of testimonials may prove that the war has not had the least influence on the quality of Krelage's bulbs or the accuracy with which orders are executed by E. H. Krelage & Son during the war.

FROM THE UNITED STATES AND CANADA.

Illinois. Received my case of bulbs from E. H. Krelage & Son in good condition, and must state they were very fine bulbs, the best I ever have had.

Peoria, April 19th., 1915. J. F. N. . .

— I received the bulbs from Holland and wish to express my joy that they are the best I have seen for a long time. I opened everything as soon as they arrived and found them fine.

Kewanee, October 16th., 1915. E. P. L. . .

Maine. The bulbs and plants were in splendid condition and we think they are unusually good in quality and quantity as compared with those we have had from dealers in this country. Everything looks promising of success and we are anticipating much pleasure from watching these new varieties develop.

Belfast, April 28th., 1915. Mrs. E. B. . . B. . .

— The catalogue we found very interesting and comparisons between it and several others which we had from other dealers, some in your own country, were entirely favourable to your firm. The plants obtained in April are giving perfect satisfaction in spite of unfavourable weather conditions.

Belfast, July 1st., 1915. Mrs. E. B. . . B. . .

Massachusetts. All bulbs purchased from you last fall were a great success, also the Dahlias.

Stockbridge, June 26th., 1915. W. P. E. . .

— Your bulbs have done wonderfully well with me as usual. Pride's Crossing, July 24th., 1915. Prof. C. L. J. . .

— We have bought many bulbs from Messrs Krelage and always found them very satisfactory.

Cambridge, July 25th., 1915. Robert Cameron, head gardener Bot. Garden Harvard University.

Nebraska. May I offer my thanks for such good stock. The oriental poppies, Japanese Anemones and Hemerocallis were better than I have received from growers here and the Phlox and Japanese Irises are especially good.

Florence, March 22nd., 1915. Mrs. G. W. H. . .

New Jersey. My bulbs arrived safely for which won't you accept my thanks. Our American growers can learn much about the proper packing and shipping of bulbs from their Holland cousins, for I certainly never received any before so nicely put up as these were.

Upper Montclair, March 25th., 1915. F. E. T. . .

Ohio. The bulbs that I have received directly from you have always been most satisfactory and I am sure, that you will deliver bulbs of as good a quality as I have received before.

Cincinnati, June 10th., 1915. Mrs. C. R. H. . .

Pennsylvania. There was never such a showing in this part of the country and my friends went wild over them. We had a cool wet season and it seemed to just suit the Darwin Tulips. They remained in bloom for over two months and one revelled in them, such gorgeous things they were.

Smethport, August 4th., 1915. Mrs. C. Mc. K. . .

Canada. As the small consignment of bulbs which you sent me last year was so satisfactory, I feel encouraged and give you a further order.

Toronto, August 5th., 1915. Mrs. W. H. B. A. . .

— I wish to say that the Dahlias that bloomed last autumn were, without exception, the finest I have ever grown and were very greatly admired by those who saw them in their flowering season.

Toronto, January 26th., 1916. D. C. C. . .

FROM OTHER COUNTRIES.

Argentina. I am pleased to say, the bulbs arrived in perfect condition and I now wait advice of further shipments against my order of February.

Buenos Aires, May 20th., 1915. M. A. P. . .

England. All the Hyacinths which I have got from you and grown in moss fibre are simply glorious and are the admiration of an Australian hospital. My husband being abroad I have given them to a canteen for the tables. Many have asked for your address as they have never seen such blooms. I am delighted with them and they seem better than ever this year.

Oxford, February 5th., 1916. E. V. . .

— The other bulbs have been a long time in getting here, Still they are in perfect condition owing to the excellent way they were packed.

Manchester, December 7th., 1915. Mrs. S. . .

India (British). I have tried other Holland firms, but I must confess my best results have been from what I have had from you.

Simla, June 24th., 1915. C. D. . .

— You will be glad to hear that the goods supplied have given satisfaction. I may send you a photograph or two later.

Simla, July 16th., 1915. R. K. H. . .

— The bulbs arrived in very good condition and the care bestowed by your firm in packing them is very creditable.

Simla, January 7th., 1916. H. de L. . .

Ireland. The plants I got from you were very successful.

Westport House, August 14th., 1915. Marchioness of Sligo.

Japan. Your shipment of a parcel containing Dahlia roots has just arrived in good condition and I wish to thank you for same. The roots are all sprouting vigorously and I am very glad with the expectation that I shall be able to see great improvement in my garden with these new additions.

Yokohama, April 23rd., 1915. S. O. S. . .

— Your sending of September 9th. has reached me quite in good condition.

Tokyo, November 26th., 1915. T. O. . .

New Zealand. For a cheap assortment like that, the bulbs turned out splendidly and all who bought with me were more than satisfied with our first order. The tulips, thanks to the excellent packing, arrived in great condition. We were so pleased with this lot, that we have decided to again order, but this time we intend going in for the better class of bulbs of which you have such a variety.

Christchurch, March 23rd., 1915. F. C. A. . .

— Your Hyacinths have always succeeded well with me and I hope this lot will turn out equally well.

New Plymouth, September 4th., 1915. S. W. S. . .

— I have had splendid results from the Hyacinths sent by you. I made a display at our last Daffodil show and they were greatly admired.

Nelson, September 23rd., 1915. A. E. T. . .

Scotland. The hanging Begonias have done excellently. I hope to get some more in spring time.

Kilmarnock, August 18th., 1915. Mrs. J. K. . .

Sweden. I was extremely pleased with the bulbs you sent last year: not one failed to flower and some were enormously large.

Stockholm, July 16th., 1915. Fm T. . . L. . .
